

SUSHANT PAIKARAO

Senior Frontend Engineer | Technical Lead | React.js & TypeScript | Data-heavy UIs, Component Systems, Production Delivery
Pune, India | Phone: +91 7057572242 | Email: sushant.paikarao.dev@gmail.com
LinkedIn: [linkedin.com/in/sushantpaikarao](https://www.linkedin.com/in/sushantpaikarao) | Portfolio: sushdream.in

Summary

Senior Frontend Engineer with 8+ years building React.js and TypeScript applications: analytics dashboards, data-heavy UIs, and reusable component systems. Stay hands-on across architecture, complex feature development, and code reviews, while leading and mentoring a team of 7 engineers alongside product, backend, QA, and DevOps in Agile/Scrum environments. Hands-on with REST and GraphQL integrations, Highcharts/D3.js, accessibility (WCAG) standards, and CI/CD releases across enterprise environments, including regulated banking.

Skills

Frontend Architecture	Component-Based Architecture, Design Systems, Reusable Component Systems, Microfrontend Architecture, Scalable UI Design, Performance Optimization
Frontend Development	React.js, Next.js, TypeScript, JavaScript, AngularJS, HTML5, CSS3, REST APIs, GraphQL, Apollo Client, REST API Integration
State Management	Redux, Redux Toolkit, Context API
UI Engineering & Styling	Tailwind CSS, Styled Components, Responsive Web Design, Cross-Browser Compatibility, Accessibility (WCAG)
Testing & Build Tools	Jest, React Testing Library, Webpack, Vite, Build Optimization
Data Visualization	Highcharts, D3.js, Chart.js, Interactive Dashboards
CI/CD & Release Management	Jenkins, Enterprise Release Process, Feature & Release Branching, SIT/UAT/Production Deployment, CyberFlow Security Validation, SonarQube Quality Gates, Change Request (CR) Process, Rollback Strategy
Cloud & Deployment	AWS Basics, CDN Concepts, Cloud-Based Frontend Deployment, Environment Configuration Management
Process & Methodology	Agile, Scrum, Sprint Planning, Cross-Functional Collaboration
AI-Assisted Development	GitHub Copilot, Cursor, Windsurf, Gemini, Claude
Version Control	GitHub, Pull Request Workflow, Code Review Practices

Experience

- Synechron Technology Pvt. Ltd — Lead Frontend Engineer

06/2021 - Present

 - Owned frontend architecture, ensuring scalability and consistent coding standards in React.js and TypeScript applications, while leading a team of 7 frontend engineers collaborating with global stakeholders for delivery.
 - Integrated 30+ REST APIs into React transaction and reporting UIs, working with backend to keep data accurate across environments.
 - Enhanced application performance by optimizing rendering, API handling, and data-driven interfaces.
 - Increased SonarQube standards by 25% through structured code reviews, mentoring, and compliance initiatives.
 - Managed frontend release cycles including Jenkins CI/CD, CyberFlow validation, and production deployment oversight.
 - Owned frontend SIT/UAT and production sign-off with DevOps, QA, and release management, including rollback plans.
- Agiliad Technology Pvt. Ltd — Software Engineer

04/2018 - 05/2021

 - Engineered modular frontend components utilizing React.js to streamline interface consistency across an AI-based analytics system.
 - Streamlined data flow in frontend systems by optimizing the handling of multiple concurrent API calls, leveraging advanced techniques in asynchronous programming for low-latency updates.
 - Facilitated synchronization between backend and QA teams through efficient sprint planning and clear communication channels within Agile frameworks.

- Refined state management logic using Redux, elevating application stability and enabling scalable feature integration for client-facing analytics dashboards.

Projects

Common Transactions – U.S. Bank | Teller Cash Recycler (TCR)

03/2026 - Present

TCR is a teller-facing banking application supporting core cash transactions — deposits, withdrawals, night drop, reversals, and multi-deposit processing — along with an integrated audit module for cash reconciliation and discrepancy tracking at the branch level.

- Developed core teller transaction workflows — deposit, withdrawal, night drop, reversal, and multi-deposit — using reusable React components and centralized state management.
- Architected the TCR Audit module for teller cash reconciliation and start-of-shift machine-balance checks.
- Implemented transaction-level audit trails capturing cash movement, teller activity, timestamps, status, and discrepancies.
- Designed workflows to flag expected vs. actual cash mismatches, enabling tellers to investigate unaccounted cash.
- Integrated audit flows with backend APIs and TCR device responses, including validations, reversals, and exception handling.
- Handled API error states and edge cases across transaction and audit flows to ensure data accuracy and reliability.

OMNIA – HSBC | GPS Insights Dashboard

06/2022 - 03/2026

OMNIA is HSBC's client analytics platform for commercial banking teams to analyze client profitability and trends. The GPS Insights dashboard offers interactive views for managers to monitor financial metrics across regions, industries, and portfolios.

- Led a team of 7 frontend engineers building React.js and TypeScript dashboards for portfolio balances, transaction volumes, and billed revenue.
- Integrated 30+ REST APIs to power reusable KPI widgets and trend charts across large financial datasets.
- Increased SonarQube compliance by 25% through structured code reviews and mentoring across the OMNIA codebase.
- Introduced filters and MTD/YTD views with optimized rendering for period analysis.
- Translated product and engineering requirements into structured dashboard views.
- Maintained dashboard stability through regulated banking releases.

Global Trade & Receivables Finance – HSBC

07/2021 - 04/2022

GTRF is HSBC's trade finance platform, helping corporate clients manage transactions, guarantees, and receivables digitally. It simplifies trade processes and enhances visibility in global markets.

- Developed React UI modules for bank-guarantee workflows and transaction reporting.
- Delivered real-time dashboards for compliance and risk: validations, exceptions, and reports.
- Processed and visualized high-volume transaction data from multiple internal systems.
- Partnered with compliance to keep reporting accurate against business rules.
- Maintained compliance-critical module stability in production.

InfoSight Integration – HPE

04/2018 - 05/2021

InfoSight Integration connects systems with HPE InfoSight, an AI analytics service optimizing infrastructure performance. It provides insights, alerts, and health metrics to help IT teams identify issues and enhance reliability.

- Integrated HPE InfoSight with enterprise systems for real-time monitoring and predictive alerts.
- Delivered React dashboards for telemetry, system health, and performance metrics.
- Consumed REST APIs and handled large datasets with optimized state management.
- Optimized concurrent API calls to improve data responsiveness.
- Collaborated with backend and DevOps on integration and deployment.
- Defined end-to-end testing strategies.
- Automated workflows for reliable InfoSight integrations across environments.

Education

Babasaheb Naik College of Engineering — 2014

Bachelor of Engineering, Electronics & Telecommunication Engineering
