

SUSHANT PAIKARAO

SENIOR FRONTEND ENGINEER

React.js & TypeScript | Microfrontends & Module Federation | Data Visualization & Interactive Dashboards

Pune, India • +91 7057572242 • sushant.paikarao.dev@gmail.com • [linkedin.com/in/sushantpaikarao](https://www.linkedin.com/in/sushantpaikarao) • github.com/Sushantplive • sushdream.in

SUMMARY

Senior Frontend Engineer with 8+ years of experience building scalable React and TypeScript applications across enterprise banking and financial services platforms. Skilled in microfrontend architecture, reusable component development, REST and GraphQL integrations, WebSocket-based interfaces, and data visualization using Highcharts and D3.js. Mentored engineers within a team of 7 and contributed to frontend delivery, sustaining zero critical post-release defects across regulated banking deployments.

TECHNICAL SKILLS

Languages & Frameworks	JavaScript (ES6+), TypeScript, React.js (18+), Next.js (SSR), Node.js, Express.js, AngularJS, HTML5, CSS3
Architecture	Component-Based & Microfrontend Architecture (Module Federation), Design Systems, Scalable UI Patterns, Microservices-Consuming Architecture, State Management (Redux, Redux Toolkit, Context API)
Build Tools	Webpack, Vite, npm, Babel
Integration	REST APIs, GraphQL, Apollo Client, WebSocket, Highcharts, D3.js, Java/Spring Boot Backend Integration, Postman
UI Engineering & Styling	Tailwind CSS, Bootstrap, Styled Components, Storybook, Figma, Responsive Web Design, Cross-Browser Compatibility
Quality & Testing	Jest, React Testing Library, SonarQube Quality Gates, Code Review Practices
Release & Compliance	Git, GitLab, Jenkins CI/CD, SIT/UAT/Production Deployment, Security Validation (CyberFlow), Change Request (CR) Process, Rollback Strategy
Cloud & Deployment	AWS (S3, CloudFront, environment configuration for static hosting), CDN Concepts, Environment Configuration Management
Practices	Accessibility (WCAG), Internationalization (i18n), Agile/Scrum, Cross-Functional Collaboration, AI-Assisted Development (Copilot, Cursor, Claude)

EXPERIENCE

Lead Technology — Synechron Technology Pvt. Ltd	06/2021 – Present
Design and build reusable, production-grade React/TypeScript components and microfrontend modules (Module Federation) across concurrent BFSI client engagements, owning critical frontend integrations spanning REST, GraphQL, and WebSocket. - Manage enterprise release cycles end-to-end, from Jenkins CI/CD and CyberFlow security validation through SIT/UAT sign-off and production rollback planning, strengthening release reliability across regulated banking deployments. - Improved SonarQube code-quality compliance by 25% by introducing structured review standards and hands-on code review, reducing critical defects surfaced pre-release. - Mentor a team of 7 engineers through code reviews and technical guidance, coordinating with client-side backend, QA, and DevOps stakeholders.	

Project: Teller Cash Recycler (TCR) — U.S. Bank

03/2026 – Present

Teller-facing banking application integrating software workflows with physical cash-handling devices for core transactions and branch-level audit/reconciliation. Enables branch staff to process everyday transactions while keeping software and hardware records in sync. Built under regulated-banking release and compliance standards.

Tech: React, Next.js, TypeScript, Node.js, Redux Toolkit, Microfrontend, REST APIs, GraphQL, Apollo Client, WebSocket, Jest, Jenkins CI/CD

- Architected the audit module reconciling software transaction records against physical device (TCR) responses, giving branch tellers a faster, more reliable way to investigate cash discrepancies.
- Built a Node.js API wrapper layer to consume and normalize REST responses from TCR device and backend services, adding validation and exception-handling before surfacing data to the UI.
- Delivered deposit, withdrawal, night-drop, reversal, and multi-deposit workflows under strict regulated-banking release and compliance standards with zero critical post-release defects.

Project: OMNIA — GPS Insights Dashboard — HSBC

06/2022 – 03/2026

Client analytics platform for commercial banking teams to monitor profitability and portfolio trends across regions. Brings together data from multiple backend systems into a single dashboard, helping teams track performance and spot trends more easily. Maintained over several years through a compliance-driven release cadence.

Tech: React, TypeScript, Node.js, Redux Toolkit, REST APIs, GraphQL, Jest, D3.js

- Delivered React/TypeScript dashboards integrating 30+ backend REST APIs across large financial datasets, sustaining stability through HSBC's compliance-driven release cadence.
- Improved period-analysis performance by re-architecting rendering and MTD/YTD data-filtering logic for portfolio managers monitoring accounts across multiple regions.

Project: Global Trade & Receivables Finance (GTRF) — HSBC

07/2021 – 04/2022

Trade finance platform integrating multiple internal enterprise systems for corporate transaction and compliance reporting. Gives corporate banking clients visibility into bank-guarantee workflows and cross-system transaction data that previously required manual reconciliation. Delivered in close partnership with compliance teams to ensure business-rule accuracy at scale.

Tech: React, JavaScript (ES6+), Redux, REST APIs, Bootstrap, Jest

- Built React UI modules for bank-guarantee workflows and transaction reporting, giving corporate clients real-time visibility into trade-finance transactions and exceptions.
- Partnered directly with compliance teams to validate business-rule accuracy across high-volume, multi-system transaction data, maintaining stability of compliance-critical modules in production.

Senior Software Engineer — Agiliad Technology Pvt. Ltd

04/2018 – 05/2021

- Built modular, reusable React.js components adopted across client engagements, reducing UI inconsistency and accelerating new-feature delivery for the team.
- Collaborated closely with backend and QA teams under Agile sprints to synchronize delivery across concurrent client engagements.

Project: InfoSight Integration — HPE

04/2018 – 05/2021

Integration connecting enterprise IT systems with HPE InfoSight, an AI-driven predictive-maintenance and equipment health-monitoring service for infrastructure hardware. Surfaces live telemetry and predictive failure alerts so IT and field teams can act before hardware issues cause downtime. Involved close coordination with backend and DevOps teams to keep the monitoring pipeline reliable across environments.

Tech: React, JavaScript (ES6+), WebSocket, REST APIs, Highcharts, Jest

- Built React dashboards surfacing real-time telemetry, system health, and predictive failure alerts for infrastructure hardware, helping IT and field teams identify equipment issues before they caused downtime.
- Optimized concurrent handling of high-frequency telemetry data streams from monitored equipment, improving dashboard responsiveness for operations teams tracking live system health.
- Defined end-to-end testing strategy and automated integration workflows across environments in coordination with backend and DevOps teams supporting the monitoring pipeline.

EDUCATION**Bachelor of Engineering, Electronics & Telecommunication Engineering**

Babasaheb Naik College of Engineering — 2014
